

Accelerate ATM Deposits with Real-Time Check Capture

Deliver faster, smarter, and more reliable deposits with automated processing.

Traditional ATM deposit solutions add unnecessary costs and strain. Outdated processes and third-party service models require on-site installers, limit deposit visibility, and leave institutions blind to ATM performance until customers complain. This results in higher costs, slower reconciliation, and dissatisfied customers.

ATM Capture digitizes check deposits at the ATM with real-time image capture, validation, and secure data transmission—reducing costs, streamlining operations, and strengthening fraud protection. With built-in heartbeat monitoring, institutions get notified immediately if an ATM stops processing check deposits, minimizing any customer impact.

ATM Capture: Real-Time, Automated ATM Check Deposit Processing

ATM Capture streamlines check deposits at the ATM with real-time automation and built-in monitoring for visibility and control.

- **Reduce back-office workload** with automated deposit handling.
- **Increase oversight** with real-time visibility into each deposit.
- **Get a single view of deposits across all ATMs** in a centralized dashboard.

What Sets ATM Capture Apart

- **Real-Time Imaging:** Increase oversight with real-time visibility into every deposit across your ATM network.
- **Always-On Monitoring:** Through built-in heartbeat monitoring, get notified immediately if an ATM stops processing check deposits, limiting impact to customers.
- **Customizable Business Rules:** Create and update deposit approval rules to match your institution's policies.
- **Remote Installation:** Deploy and update software quickly through the Universal ATM Installer, eliminating the need for on-site technicians (requires ability to connect remotely to ATMs).
- **Platform-Agnostic:** Integrate seamlessly with all major ATM models, drivers, and core systems, including Diebold, NCR, Hyosung, and Cummins Allison.

Key Benefits for Financial Institutions

- **Cost Savings:** Reduce time and expenses associated with manual back-office work and reconciliation.
- **Operational Efficiency:** Streamline operations with automated deposit handling and reconciliation.
- **Enhanced Security:** Reduce fraud risk with deposit approval rules and smart decisioning.
- **Visibility and Control:** Gain real-time access to deposited check images and transaction data through a secure portal.
- **Customer Experience:** Enable 24/7 check deposits at your ATMs so that customers can deposit checks at their convenience.

How ATM Capture Works

1.

Customer:

The customer deposits a check via image-enabled ATM, capturing high-quality images and transaction data.

2.

WISCUB Service Center:

WISCUB Service Center receives the check images and transaction data for processing, validation, and

3.

Financial Institution:

Reconciliation reports are archived or securely delivered to the financial institution with daily item processing reports.

Modernize Your ATM Channel with Real-Time Check Deposits

Processing ATM check deposits shouldn't slow you down. With ATM Capture, check deposits are imaged and transmitted in real time, reducing back-office workload, reconciliation issues, and fraud risk. It's time to make your ATMs work smarter, not harder.
